

Ieuan King

Brooklyn, NY · ieuan@yionvisual.com · akabuild.dev · akaoss.dev · github.com/akaieuan

Product designer and design engineer with a background in digital anthropology. Four years building human-in-the-loop AI tools for expert users: designing the interfaces, building the front end, and running the research and evaluation that shaped both. Five published open-source projects spanning HITL component libraries, agent evaluation, and developer tooling.

SKILLS

Design & Research: Product design, design systems, UX research, user interviews, usability testing, session-replay analysis, content strategy, UX writing, evaluation design

Frontend: React, TypeScript, Next.js, shadcn/ui, Tailwind CSS, HTML/CSS, Electron, Three.js, component architecture, CI/testing

AI & Agents: Claude Code, Cursor, Codex, agentic UI/UX, system prompt engineering, agent evaluation, MCP, RAG, tool-use patterns, Anthropic & OpenAI SDKs

Also: Python (Blender API, published package), Blender, Godot 4, Ableton, PostHog, Figma

EXPERIENCE

Ubik Inc / Co-Founder / Product Design & Engineering

Jan 2023 – May 2026

- Owned product design and the entire front end of a human-in-the-loop AI research platform, across a Next.js web app and Electron desktop client: architecture, design system, component library, and every interface decision
- Designed the agentic UI — live agent status, streaming task states, approval flows, and citation-verification surfaces — for a product built around trust, evidence attribution, and human control
- Authored product copy, microcopy, and content guidelines establishing voice, tone, and terminology standards across all user-facing surfaces
- Built custom evaluation datasets across hundreds of multi-hop agent sessions, tracking tool selection, golden-truth expectations, and failure patterns to drive prompt, guardrail, and product redesign
- Ran discovery and usability research with design partners across academia, biotech, and law; translated interviews and session replays into shipped changes, often the same week

aka4UH / Producer / Performer / Creative Director

2019 – Present

- Released electronic music across multiple labels: 4M+ streams, 174 countries, 400K+ unique listeners since 2022; performed internationally
- Organized and promoted live events in NYC booking artists from Montreal, Tokyo, and mostly local, focused on highlighting homegrown talent

OPEN SOURCE — AKAOSS (AKAOSS.DEV)

HITL Kit — 15 human-in-the-loop UI primitives across six npm packages, distributed via shadcn CLI. Tokens, variants, states, and accessibility handled at the primitive level. v0.6.

eval-kit — Measurement instrument for multi-step agents. v0.3.1, three npm packages, four adapters (Anthropic, OpenAI, HTTP, mock), three reference suites. Human-scored rubrics, CI-gated regression checks; refuses LLM-as-judge by default.

Collapse — Claude Code skill-building framework: MDX ingestor with cross-stack reference lessons, template engine with trigger-phrase derivation, three-tier skill quality linter. v0.1.0.

tag-kit — Structured annotation primitives for human-in-the-loop review workflows. Zero-runtime-dependency core plus headless React layer; extracted from a content moderation tool.

Hologram — Live observability, guided skills, and an MCP surface for Blender → glTF pipelines. Python 3.10+, MIT. v0.5.0. Built alongside a procedural asset pipeline: 112 Python scripts generating 89+ game-ready assets, with Three.js browser previews cutting validation from ~30s to ~1s.

RESEARCH

"An AI Measurement Problem" (akaoss.dev/paper) — Perspective paper arguing the AI failure crisis is at root a measurement crisis, synthesizing benchmark science, cognitive neuroscience, uncertainty quantification, and enterprise deployment data. Makes the case for Assist-Not-Complete: evaluate AI on whether it assists humans without displacing them, not on whether it finishes alone.

Lab log (akaoss.dev/research) — Reproducible, human-scored experiments run on eval-kit suites. Current study uses distractor tasks where passing requires the agent to push back on unverifiable claims and future-dated sources: scoring refusal, not compliance.

EDUCATION

SUNY Purchase / B.A. Anthropology & Media Studies, 2018 – 2022 — Focus: human-computer interaction, datafication, algorithmic systems, screen addiction in children, digital capitalism, gentrification politics. GPA 3.5.

Xavier High School / 2014 – 2018 — AP Computer Science, French 3
